IP Audio acquisition terminal
GGM IPACONV

Keep your old equipment! This product allows you to convert the audio flow coming from equipment with RCA audio output (DVD players, external source, CD player, ...) and to re-inject them into the network for use with the IP sound system software. This product includes an ultra-rapid processor able to produce a high quality conversion. Depending on the chosen application, there are 3 conversion modes: ordinary, average and Hi-Fi. This product will be able to solve a large part of the restrictions when your 100 V sound system migrates to IP technology.

Product features

- Transmission rate : 100mbps

Article features

- Continous recording : 80 Hz ~ 14 kHz (+1 / -3 dB)
- Power Consumption : 65 db
- Sampling : 8 kHz ~ 48 kHz
- Sound mode : Adpcm cm
- Power supply : 12 vdc / 1 a
- Weight (kg) : 0
