Provide intelligence to your CCTV system with the AI Bridge range.

Efficiency of your CCTV system is a key element for the security of your buildings. False alarms can cause many issues and render your system ineffective.

The AI bridge Pro box includes analytics functions based on artificial intelligence. These functions can bring new market opportunities to your installation and can decrease the number of false alarms compared to traditional CCTV systems.

You can keep your existing IP cameras!

The configuration is made through a simple web page.

This device can work in standalone mode to trigger alarms or can be connected to a VMS (Network optics) for a complete integration.

Several functions can work at the same time.

AI Bridge Pro includes the following functions:

- Basic attributes
- Advanced attributes
