

MobileKey transponder with blue button
OVS MKTRA2G2

In the MobileKey system, the transponder is the electronic key. Thanks to its high performance battery, the transponder may activate up to 400,000 closure operations. The digital "key" communicates with the electronic locking cylinders by radio; these latter can only be activated if the authorisation is valid. In case of loss, the transponder can be blocked in the blink of an eye.

Black plastic (polyamide) box Dimensions: 42 x 13.7 mm (Ø x h) Protection Code IP 65 Typical reading distance: up to 40 cm from the locking cylinder Type of battery: 1 x CR2032 3V lithium Battery life: Up to 400,000 manoeuvres or 10 years on standby Operating temperature: -25 °C to + 65 °C Environmental class: III Up to 4 MobileKey or system 3060 (G2) locking installations
