

COMPLEMENTARY INTRUSION MODULE

GGM AXCSMODINTR

INTRUSION MODULE FOR GGM ACS

The Intrusion module allows management of central control intrusion systems of the Risco brand with the LYGHTSYS / PROSYS range, and the HONEYWELL brand with the GALAXY DIMENSION range. With RISCO products, it is possible, by using the GGM AXCSINTR extension card to connect the central control to the software. It is possible to display the intrusion installation on the access control and surveillance synoptic. It is also possible to interact with the central control and recover the information history.

FEATURES

Arming/disarming via synoptic :	Yes
Commissioning report management :	Yes
Management of commissioning pre-alarms :	Yes
Maximum number of controllers :	5
