

HD analog and IP video tester. 7inch touchscreen, it supports IP, AHD, CVI, TVI CVBS technologies. IP cameras up to 8K resolution. PoE+ Injector embedded (up to 30 W) Onvif compliant Wifi

GGM TESTCAMIPEVO

The GIGAMEDIA TESTCAMIPEVO tester has a 7-inch touch screen allowing comfortable use of the product. Designed under Android, it supports analog (CVBS), analog high definition (AHD/CVI/TVI) and IP technologies.

It supports resolutions up to 8K in H265.

Its 7800 mAh battery gives it a battery life of up to 16 hours*. It charges in just 3.5 hours.

This product has two Gigabit Ethernet ports and one SFP port for connection over the network. It can provide POE+ power to devices (30W max).

Network test functions are available (trace route, DHCP server, Ping, etc.) to facilitate startup without existing network infrastructure.

It has an HDMI input/output port and a VGA port, for connecting equipment such as recorders or monitors.

An analog color generator is available to calibrate your monitors.

A wifi module is integrated into the product.

A UTP cable test module will check continuity or validate connectivity and cabling defaults.

12/24V DC power outputs are also available to power equipment for testing.

Onvif compatible, this product will be compatible with the majority of IP cameras on the market.

A lot of software is integrated into this product.

An 8 GB memory card allows you to store recorded snapshots and videos.

Ideal tools for your installations and maintenance, the camera tester will save you considerable time on your construction sites.

* autonomy may vary depending on the modes activated on the product.

Article features
